

## 571- FOI - 4958 - Hip & Knee Replacements

Question	Response
<p><b>Number of patients that had hip or knee replacements and waited 18 weeks or less from referral to treatment</b></p>	<p>The Trust reports waiting times/list data as per national requirements and for waiting list, the Trust is obliged to report on incomplete pathways at a specialty/Trust level, but not at an intended procedure level. The Trust reports the number of patients who are waiting at any given moment in time (usually at the end of the month for national reporting) the length of time the patient has waited based on RTT (referral to treatment) rules; the length of time waited at any given moment in time is characterised by the events associated with the patient pathway and these events; the consequential impact can therefore be different for each patient, and there is a significant risk the length of time waited at any given moment in time may be skewed.</p>
<p><b>Number of patients that had hip or knee replacements and waited between 18 and 26 weeks from referral to treatment</b></p>	<p>It is our understanding that the information requested in this particular question is referring to those patients treated in a particular month and providing a retrospective time taken between the date the patient is referred to the hospital and the date the patient receives their definitive treatment, and counting the number of patients that waited over a certain number of weeks. As each patient pathway is unique and characterised by the nuances in terms of events in the pathway which could impact the length of time they have waited from when they are referred, providing the RTT waiting time between certain amounts of time would be misleading.</p>
<p><b>Number of patients that had hip or knee replacements and waited between 26 and 52 weeks from referral to treatment</b></p>	

<p><b>Number of patients that had hip or knee replacements and waited more than 52 weeks from referral to treatment.</b></p>	<p>Furthermore, waiting list data has the intended procedure the patient is due to have and this may not always be the actual final procedure a patient has when they undergo treatment and therefore aligning treatment with waiting list data retrospectively is extremely difficult and fraught with challenges, particularly where a patient may be waiting for multiple and different treatments.</p>		
<p><b>Questions</b></p>	<p><b>Comments</b></p>	<p><b>Hip</b></p>	<p><b>Knee</b></p>
<p><b>Total number of patients that had hip or knee replacements.</b></p>	<p>Provided are the total number of patients that were admitted electively (from the waiting list) for a hip or a knee replacement between 1st April 2018 and 31st March 2019.</p>	<p>237</p>	<p>247</p>
