

FREEDOM OF INFORMATION REQUEST

In your trust how do you review patients with Atypical Parkinsonian Syndrome in outpatients.

I would appreciate if the following information could be provided, under the Freedom of Information Act, by answering this questionnaire and returned either

FREEDOM OF INFORMATION REQUEST QUESTIONNAIRE

In your trust how do you review patients with the following conditions in outpatients.

Please select all settings that apply with approximate numbers of patients seen over a year in each setting and the numbers of consultants seeing these patients in this setting. Please also indicate if there is a member of the therapy team or a nurse who sees the patient in the clinic and which member of the team this is. Please specify the approximate frequency of review for each setting or a range for review and specify if patients have a point of contact between appointments and who that is with (e.g. clinic coordinator).

If these patients are instead seen in another trust please include this in 'other'.

Lastly please tell us if Parkinson's disease nurses will see these patients in your region.

PROGRESSIVE SUPRANUCLEAR PALSY

- General neurology clinic

Number of patients seen over a year: **New diagnoses 3-6/year**

Number of consultants seeing patients: **4**

Therapists or nurse in clinic (please detail): **New referrals therefore n/a**
