

Date of Report: 02/03/2023

FOI - 7935

Questions	Notes/Comments	Response
a. For the period 1st January 2022 to 31st December 2022 (or the most recent 12 month period available), the number of patients diagnosed with genetic haemochromatosis under your care.	We have used the ICD-10 diagnosis code 'E831 Disorders of iron metabolism' to identify the number of patients discharged from MKUH with genetic haemochromatosis between 1st January 2022 and 31st December 2022.	122
b. For the period 1st January 2022 to 31st December 2022 (or the most recent 12 month period available), the average time in days from first referral from primary care to the patient's first appointment within your trust.	The requestor confirmed they require the data for genetic haemochromatosis. We do not record diagnosis data against our outpatient appointments so we would be unable to identify those patients that had a diagnosis of genetic haemochromatosis in an outpatient setting, and therefore are not able to provide an average waiting time for these patients	NA
